

# Portable Architecture

From conferences to retail displays, tradeshows to permanent exhibitions, Portable Architecture provides a time efficient and cost-effective method of delivering on your display objectives, allowing you to pop-up, present and pack away, quickly and easily.

## Compact

Portable Architecture comes with its own travel case that stores all parts and graphics. The travel case can even be transformed into a counter by covering it with specially cut graphics. We've ensured that every part of the system is utilised, keeping your exhibition looking neat and professional.

## Guarantee

Portable architecture has a life time frame warrantee.

## Complete service

With rising costs for storage and manpower at a premium, it's nice to know that someone else considers the expense and logistics associated with putting on a show. That is why we provide full installation, dismantle, transport and storage services. Part of our service is to coordinate your exhibition needs to plan the timely transport and installation of your stand and as an added bonus we will even clean, maintain and adjust your stand free of charge.

# Portable Architecture

## Accessories

### Shelving

Portable Architecture is a stylish way of housing bulky hardware. Touch screen monitors, television screens or even coffee machines can be housed inside your display using our custom made shelving. Images and colours used around the shelving can be designed to complement its content.

### Back-lit

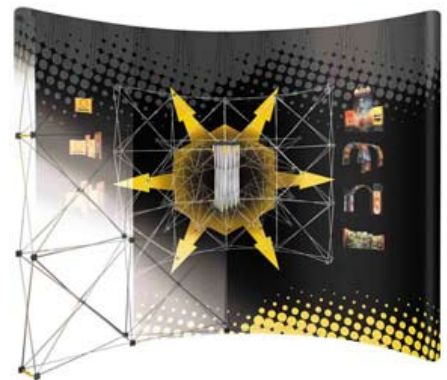

Our Portable Architecture is the only portable display brand available with a back-lit facility. Using our state of the art Durst Lambda printer, we are able to print large, photographic quality images on back-lit material. These images come to life when illuminated from behind, giving your stand a truly vibrant appearance.

### Graphics

At Flash Photobition, we continue to invest in digital imaging and output technology providing you with graphics of superior quality. Our Durst Lambda Printer has the ability to expose digital images and text files directly onto conventional, reflective and back-lit photo materials. Through laser imaging, the Lambda will produce a high quality, continuous tone image.

### Spotlights

We also provide a choice of purpose designed spotlights that can be mounted to your display. By printing the image on a metallic Lambda material, a pearlescent finish is achieved when the light hits the display. Spotlights can also be used to enhance the look of your graphics, making your display stand out from the crowd.
